1. Cut boot at first line, if cord is greater than 5/8". Invert tapered end of the boot and apply soap solution.

2. Push cord through the inverted end about 18”. A tug in the opposite direction returns boot to its original shape.

3. Push cord through the plug/connector housing.

4. Strip cord and attach to device (see device’s instructions).

5. Lubricate mouth of boot and rear shoulder of device with soap solution and pull into place.

6. Be sure boot is on as far as it will go.

Note: This product is part of an assembled system that meets IP56 where consisting of the following components: (1) female connector, (2) weatherproof cover with threaded ring and (3) connector cap.
