Binocular Parts

1. Adjustable eye-piece
2. Center focus knob
3. Rubber eyecups

A. How to Adjust Distance Between Eyepieces

For best viewing, the binoculars should be adjusted for the individual user so that the eyepieces line up with the user's eyes:

1. Hold the binoculars in a normal viewing position.
2. Grasp each barrel firmly. While looking through the binoculars, move the barrels until you see a single, circular field of view. Reset the binoculars to this position each time you use them. The eye distance setting is indicated on the scale located on the binocular hinge.

B. Diopter Setting and Central Focusing

1. Set the right eyepiece (1) to zero and look at a distant object.
2. Keeping both eyes open, cover the right objective (front) lens with your hand, then adjust the center focus wheel (2) until an image in the left eyepiece appears sharp.
3. Cover the left objective (front) lens with your hand, then rotate the right eyepiece until the image appears sharp again.
4. Diopter setting is now correct for your eyes, and you need only adjust the center focus to view objects at different distances. Note this diopter setting for future use.

C. Roll-down Eyecups

To use binoculars while wearing eyeglasses or sunglasses, roll down the eyecups. This will allow you to bring your eyes close to the binoculars for an improved field of view.

E. Instructions for Care

1. Blow away any dust or debris from the lens (or use a soft lens brush).
2. To remove dirt or fingerprints, gently rub in a circular motion with soft cotton. Clean with care, as coarse cloth or excessive rubbing can scratch the lens surface.
3. For a more thorough cleaning, photographic-type lens cleaning fluid may be used. Always apply the fluid to the cleaning cloth, not to the lens.
4. Do not immerse the binoculars in water. If the binoculars get splashed, dry them quickly. These binoculars are not waterproof and will be damaged by extended contact with water.

Very Important

It is not necessary to clean binoculars internally. Attempting to take binoculars apart or clean them internally will result in damage.

Caution

Do not use this product to view the sun. Looking directly into the sun, with or without binoculars, can cause permanent eye damage.
